Paired recorded discoveries on the original target population

Descriptive comparison; unequal work. Pending targets are not failed chemistry.

MCTS vs Greedy I · Stock AND closure

Population	Both	MCTS only	Greedy only	Neither recorded
All n=460	37	162	1	260
Observed n=200	37	162	0	1

Full-population difference (percentage points): 35.00; 95% CI [30.65, 39.35].

MCTS vs Greedy I · Every essential reaction A/B

Population	Both	MCTS only	Greedy only	Neither recorded
All n=460	0	1	0	459
Observed n=200	0	1	0	199

Full-population difference (percentage points): 0.22; 95% CI [0.00, 0.65].

MCTS vs Greedy II · Stock AND closure

Population	Both	MCTS only	Greedy only	Neither recorded
All n=460	35	164	1	260
Observed n=200	35	164	0	1

Full-population difference (percentage points): 35.43; 95% CI [31.09, 39.78].

MCTS vs Greedy II · Every essential reaction A/B

Population	Both	MCTS only	Greedy only	Neither recorded
All n=460	0	1	0	459
Observed n=200	0	1	0	199

Full-population difference (percentage points): 0.22; 95% CI [0.00, 0.65].

2,000 paired target bootstrap draws; seed 17. CIs are descriptive, not matched-compute effects.

The observed subset is selected by search completion, not a representative full-cohort estimate.
