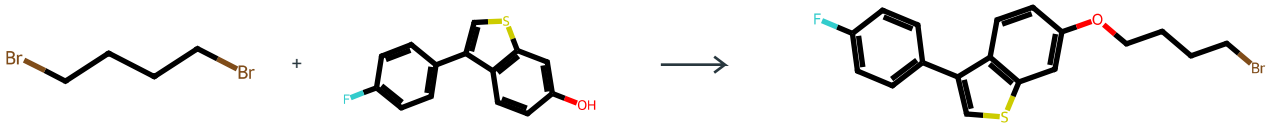
## Performed experimental precedent for generated complete reactions

Selected cases; complete net chemistry, not experimentally established electron-arrow sequences.

### 1. Tier A · US7173043B2:example27.4:fluorophenyl-benzothiophene-bromobutyl-ether



US7173043B2, Example 27.4 / 27.1: benzothiophenol + 1,4-dibromobutane; K2CO3 / acetone, 45 C, 10 h; excess dibromide removed in vacuo. MS 378 (M, 1 Br). No individual yield or purity reported; not the isothiazole or three-carbon-linker analogue.

### 2. Tier A · US5110940:example108:tetrazolyl-allylic-alcohol-oxidation

US5110940, Example 108: allylic alcohol 2.2 g + activated MnO2 7 g, CH2Cl2 100 mL, 20 h; temperature unspecified. Reported quantitative yield and mp 208 C (decomp). Elemental-analysis discrepancy retained; no numerical isolated yield or purity claim. N2-trityl tetrazole and diaryl alkene retained.

Source/training overlap unknown; an experimentally documented transformation is not a tested whole route.
