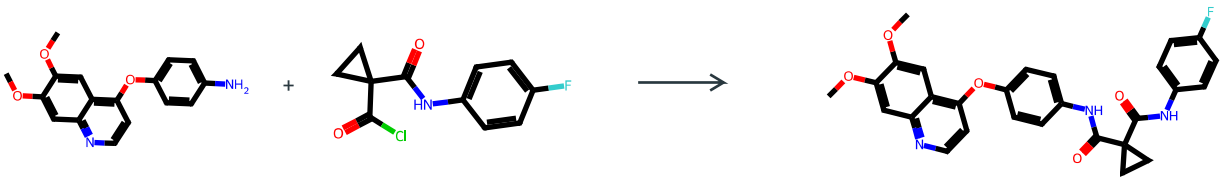
Cabozantinib free base: source-checked net reactions and inverse electronic construction

All leaves in frozen stock · 2 essential net reactions

1. Tier A · US20160022662A1



K2CO3; THF/water; addition not exceeding30C; reported completion approximately20min; precipitation at20-25C approximately10h

2. Tier A · WO2018104954A1

Example1: acid112.9g, thionyl chloride180.4g, THF600mL,25-30C,5h; then used in situ for coupling. No acid-chloride isolated yield or independent characterization is given.

explicitly identified in-situ synthetic intermediate; not isolated or independently characterized in Example1

Primary sources support net transformations; exact symbolic arrows are displayed separately.
